

**Einstein was once asked how it felt to be the smartest man alive. Einstein's reply was "I don't know, you'll have to ask Nikola Tesla."**

The Mind Unleashed

## **AESOP'S SOLAR POWERED 24/7 ENGINES - CLOSE TO RUNNING - A PROGRESS REPORT**

In 1900 Nikola Tesla published what he considered his most important article. Entitled: *The Problem of Increasing Human Energy - Through the Use of the Sun* He discussed the possibility of generating power from atmospheric heat.

The earth is very much warmer than outer space. Such engines cool a portion of the air below the temperature of the surrounding atmosphere. Operating by use of the extracted heat - they produce energy directly from the ambient air without consumption of any fuel.

**A Ford engine has been converted - and a Kia engine is being completed - by Chris Hunter, a brilliant inventor. Propane fills the sealed engines as a refrigerant. Frost forms on the engines - proving the concept.**

Prof. Daniel Sheehan Ph.D. University of San Diego: *"Recent challenges to The Second Law of Thermodynamics from a number of research groups focus on those most amenable to laboratory test. The most significant result appears to be the recyclability of environmental heat into usable work. The thermal energy content of the atmosphere, ocean, and upper crust is estimated to be more than 10,000 times that of the world's fossil fuel reserves, making it a potentially inexhaustible reservoir of green energy". See: SECOND LAW SURPRISES under MORE at [aesopinstitute.org](http://aesopinstitute.org)*

AESOP Institute is currently moving toward completion of the conversion of a small Briggs & Stratton engine and a Mitsubishi V6. The V6 could air-condition a home as a bonus. Both engines will be validated by a distinguished Independent lab, followed by licensing to engine manufacturers world-wide.

**Since mass-production can readily follow, this may prove to be the fastest path to replacement of fossil fuels.**

**Climate change can end human life beginning in 7-15 years. Record breaking heat is here now. This is a largely unrecognized emergency. We may need to reduce fossil fuels by 80% within 5 years to insure human survival. (See Arctic News for data).**

The website: [aesopinstitute.org](http://aesopinstitute.org) explains how such engines function. A WHITE PAPER is available and describes Proof-of-Concept.

With generators that function 24/7/365 there is little need for energy storage.

Fuel-free engines could provide unlimited range to hybrid and electric cars. Vehicles can become power plants when suitably parked, selling power to utilities (V2G) or powering buildings. Cars, trucks & buses could eventually pay for themselves. Parking lots can become multi-megawatt power plants.

*A small family of engines that will run on atmospheric heat (and need no fuel) has been invented. Ken Rauhen, AESOP's CTO, is the inventor of several. He recently presented his work regarding: Bending the Second Law of Thermodynamics, at the AAAS meeting in San Diego section on the Second Law, sponsored by Dr. Sheehan. This is his fourth such Conference presentation. Physicists have attended each and have found no problem with his analysis.*

*“Always listen to the experts. They will tell you what can't be done and why. Then just do it.”* Albert Einstein

***AESOP is doing it. A few thousand dollars without delay can accelerate completion of prototype engines. With that additional support, AESOP could have working Briggs & Stratton & Mitsubishi V6 examples within 30 days!***

The impact on the world economy of continuous cheap green energy will be extraordinary. The potential in terms of jobs and new business is staggering!

**TROLL ALERT! AESOP is slandered by Trolls, including rants by an obsessed individual, posting some truth and many lies, errors and distortions, using pseudonyms, posing as a fake 'Physics Review Board'. He repeats false charges of fraud and dishonesty. My bio is on the [aesopinstitute.org](http://aesopinstitute.org) website.**

*Nikola Tesla: “In this present world ...a revolutionary idea or invention is hampered in its adolescence – by want of means, by selfish interests, pedantry, stupidity and ignorance. It is attacked and stifled, and passes through bitter trials and tribulations. ... All that was great in the past was ridiculed, condemned, combated, suppressed, only to emerge all the more powerfully, all the more triumphantly from the struggle.”*

**Abundant additional information is available upon request. AESOP Institute is seeking donations (501C3 & CA Tax Exempt) or Modest Convertible Loans. An eventual total of \$40,000, or more, will assist AESOP's team to accelerate this urgent work. Call 707 861-9070 or write to [mark@aesopenenergy.com](mailto:mark@aesopenenergy.com)**
